Cubby shelves are shipped to accommodate 3-ring binder height. When delivered, the top cubby opening may be shorter than other cubby heights because of the overall cabinet height restrictions. Cubby shelf height is adjustable in 32mm (1.26") increments, so adjust height to achieve desired cubby sizes. You can also add or subtract cubby shelves to achieve the desired number of compartments.

68"H units and above will have one fixed shelf at 43" from floor.

Cubby width is fixed and equally divided within the unit. To determine cubby width, subtract .75" for each vertical panel from the overall cubby storage width dimension. Take that number and divide by the number of vertical cavities. For example, for a 48"W cubby unit with 3 cubbies will have 4 vertical panels. The cubby width is 15".

See equation below.
(Overall width in inches-(#vertical panels x .75"))
/3=cubby width (48-(4*.75))/3=15
